

Summer Camp Programs

Camp Exploration

Mad Science invites you to explore different things in the world around you - and inside you, too! Learn about the environment and how we affect it, discover how animals adapt to their surroundings, become a detective and help to solve a mystery, learn about how your body works, and explore the science behind sports! Five fun-filled days available with hands-on exploration, take-home activities and more! Camps are designed for elementary-aged students and available both for full and half days.

Earth Awareness

How can we do our part to protect the earth - and have fun, too! Campers will recycle old paper to make new usable paper, learn about the effects of pollution, help make a snack using solar power and much more!

Nature

During the Nature day, campers will explore the animal kingdom, life cycles and habitats. They will make animal tracks, follow a trail, and learn how animal anatomy helps them survive. Then play the survival game to see who makes it to the end.

Scene of the Crime

Would you make a good detective? In the Scene of the Crime, campers learn the science behind solving a mystery and then use their skills to discover whodunnit! Learn to look for evidence and analyze it. Seeing is not always believing!

The Organ Trail

Learn all about what's going on inside of you. Make a body portrait and add to it as you learn the wonders of how your body systems work. From your heart to your lungs, to the mucus in your system - it all comes together to make you who you are.

Science of Sport

Investigate the scientific concepts involved in all aspects of sports, from equipment to technique. Learn how your body helps you play different sports, why you need to protect yourself, and the physics behind activities. Make a balancing center-of-gravity toy to use at home.

- ❖ Complete programming available for a full week of summer fun science activities!
- ❖ Can be customized to full-day or half day programs
- ❖ Take-home projects part of each topic
- ❖ Can be integrated into existing summer programs or be independently operated.
